

Novel Website Idea:

Our objective is to create a platform for discovering novels based on protagonist psychology, philosophy, and storytelling style. This app is for readers who enjoy psychologically deep, strategic, and philosophically unique novels. There is no good way to discover similar works.

Name: Axiom (Philosophical Webnovel Database)

Our main distinguishing feature is that our app will assign novels based on these 3 profiles:

Protagonist Profile

Trait	Score
Strategic Thinking	98
Long-Term Planning	96
Manipulation	94
Ruthlessness	95
Emotional Attachment	2
Internal Consistency	100
Adaptability	100
Curiosity	75
Compassion	4
Ambition	88

Philosophy Profile

Theme	Strength
Freedom	95
Survival	80
Existentialism	90
Moral Ambiguity	100
Self-Improvement	85
Determinism	60
Revenge	10
Romance	5

Storytelling Style

Style	Score
Political Intrigue	90
Psychological Warfare	95
Kingdom Building	20
Action	70
Slice of Life	0

Mystery 65
Worldbuilding 98

We should have an info page for these profiles that describe the meaning of each trait and what each score represents. (For example, a ruthless score of 100 means that this character has no compassion or mercy to anyone throughout the story. While a score of 90-99 means that there may be one or two moments where this character can be debatably seen as softer.)

MVP:

The first version should do **one thing exceptionally well**:

A reader finds one protagonist they love and discovers other novels with psychologically similar protagonists.

That means the MVP only needs:

- **Novel pages** with basic information: title, cover, synopsis, genres, status, and where to read.
- **Protagonist profiles** using a fixed set of scored psychological traits.
- **Philosophy profiles** showing the major ideas and themes explored by the protagonist or novel.
- **Storytelling-style profiles** showing *how* the story feels to read.
- **Similarity recommendations** such as “83% similar protagonist” or “Similar in strategic thinking, ruthlessness, and internal consistency.”
- **Filtering and discovery**, where users can search for things like:
 - Strategic Thinking > 90
 - Romance < 10
 - Political Intrigue > 70
 - Emotional Attachment < 20
- **A small, curated launch database** of perhaps **30–50 novels**, not thousands. Some extra goals are to find people that
